CURRENT MEDICATIONS

metformin — Oral
atorvastatin — Oral

ALLERGIES

No Known Drug Allergies

LOCATION

Cumberland Murfreesboro

CHIEF COMPLAINT

Left heel and arch pain, worse with first steps in the morning, 2 months.

HISTORY OF PRESENT ILLNESS

Patient describes two months of left plantar heel pain that is most severe with the first steps in the morning and after periods of rest, improving somewhat with activity then worsening again by day's end. He works on his feet as a warehouse supervisor. No antecedent trauma. Has tried over-the-counter arch supports without relief.

PHYSICAL EXAM

Left foot: point tenderness at the medial calcaneal tuberosity, pain reproduced with passive dorsiflexion of the toes. No swelling or erythema, pulses 2+ and symmetric, sensation intact. Mild pes planus noted on standing.

IMAGING

XR foot (left) — performed 06/03/2025
Weight-bearing views of the left foot. Small plantar calcaneal spur. No stress fracture or acute osseous abnormality. Joint spaces preserved.
Impression: Plantar calcaneal spur consistent with chronic plantar fasciitis; no acute fracture.

ASSESSMENT

- Plantar fasciitis, left foot (M72.2) [Primary]
- Pain in left foot (M79.672)

PRESCRIPTIONS

diclofenac 75 mg tablet — PO
Sig: Take 1 po bid x 3 weeks with food
Quantity: 42.0 Tablet Refills: 0 Action: new

PLAN

Clinical picture consistent with plantar fasciitis. Obtained weight-bearing foot films to evaluate for a heel spur and rule out stress fracture given his age and occupation. Recommended diclofenac, a night splint, calf and plantar fascia stretching, and supportive footwear.

Follow up in 6 weeks
