Date of Service: 07/02/2025 Provider: Marla Whitcomb, NP

CURRENT MEDICATIONS

levothyroxine — Oral

ALLERGIES

No Known Drug Allergies

LOCATION

Cumberland Brentwood

CHIEF COMPLAINT

Right wrist pain at the base of the thumb, 3 weeks.

HISTORY OF PRESENT ILLNESS

Patient reports three weeks of right radial-sided wrist pain that began after increased computer use and lifting her toddler. Pain worsens with thumb use, gripping, and ulnar deviation of the wrist. No history of trauma. Denies numbness or tingling in the hand.

VITALS

BP	Pulse	Resp	O2 Sat	Temp	Ht (in)	Wt (lbs)	BMI	BSA
118/76	72	16	99	98.2	64.0	142.0	24.4	1.75

PHYSICAL EXAM

Right wrist: tenderness over the first dorsal compartment at the radial styloid, positive Finkelstein test. No swelling of the MCP or PIP joints, full digit range of motion, sensation intact throughout.

IMAGING

XR wrist (right) — performed 07/02/2025
Three views of the right wrist. No fracture or dislocation. Normal bone density and joint alignment. Soft tissue swelling overlying the radial styloid.
Impression: No acute osseous abnormality, right wrist; findings compatible with clinical diagnosis of de Quervain tenosynovitis.

ASSESSMENT

- Right radial styloid tenosynovitis (de Quervain) (M65.4) [Primary]
- Pain in right wrist (M25.531)

PRESCRIPTIONS

naproxen 500 mg tablet — PO
Sig: Take 1 po bid x 2 weeks with food
Quantity: 28.0 Tablet Refills: 1 Action: new

PLAN

Findings consistent with de Quervain tenosynovitis. Obtained wrist x-rays to rule out osseous pathology given point tenderness. Thumb spica splint recommended in addition to scheduled NSAIDs and activity modification. Will consider a corticosteroid injection if not improved at follow-up.

Follow up in 4 weeks
