CHIEF COMPLAINT

Right elbow pain, worse with gripping, 5 weeks.

HISTORY OF PRESENT ILLNESS

Patient reports five weeks of right lateral elbow pain that began after increased racquet sport activity. Pain is worse with gripping, lifting objects with the palm down, and shaking hands. No numbness or tingling into the hand. No prior elbow injury.

VITALS

BP	Pulse	Resp	O2 Sat	Temp	Ht (in)	Wt (lbs)	BMI	BSA
124/78	68	14	99	98.3	72.0	195.0	26.4	2.05

PHYSICAL EXAM

Right elbow: point tenderness over the lateral epicondyle, pain reproduced with resisted wrist extension and resisted middle finger extension. Full elbow flexion and extension, no effusion, stable to varus and valgus stress.

ASSESSMENT

- Lateral epicondylitis, right elbow (M77.11) [Primary]

PRESCRIPTIONS

ibuprofen 800 mg tablet — PO
Sig: Take 1 po tid x 2 weeks with food
Quantity: 42.0 Tablet Refills: 1 Action: new

PLAN

Findings consistent with lateral epicondylitis. Recommended a counterforce brace, activity modification avoiding racquet sports, and scheduled NSAIDs. Discussed an eccentric wrist extensor strengthening program. No imaging indicated given the classic clinical presentation.

Follow up in 4 weeks

CHIEF COMPLAINT

Follow-up right lateral elbow pain, partial improvement.

HISTORY OF PRESENT ILLNESS

Patient returns reporting about thirty percent improvement in right elbow pain with brace use and activity modification. Still has pain with heavy gripping tasks at work. Has been compliant with home eccentric strengthening exercises.

VITALS

BP	Pulse	Resp	O2 Sat	Temp	Ht (in)	Wt (lbs)	BMI	BSA
122/76	66	14	99	98.1	72.0	194.0	26.3	2.04

PHYSICAL EXAM

Right elbow: mild residual tenderness over the lateral epicondyle, improved strength with resisted wrist extension, full range of motion, no effusion.

ASSESSMENT

- Lateral epicondylitis, right elbow, improving (M77.11) [Primary]

PRESCRIPTIONS

ibuprofen 600 mg tablet — PO
Sig: Take 1 po tid PRN with food
Quantity: 30.0 Tablet Refills: 1 Action: modify

PLAN

Continued improvement in lateral epicondylitis with conservative management. Adjusting ibuprofen to an as-needed dosing schedule and continuing eccentric strengthening. Will consider a corticosteroid injection if there is a plateau in improvement.

Follow up in 8 weeks
